# Issues

- **Troubles getting gas for the Muon Drift Tubes**

A tube trailer was received on April 22nd and again on April 28th, both times it was found out of spec. We switched from trailer to cylinders. A new tube trailer is expected to be delivered tomorrow.

- **Muon readout crates (twice 30min downtime)**

- **L2 rack trip on Saturday**

Prevented us from taking data for ~4 hours. Several experts in.

- **Faulty board in L2 global on Sunday**

# SMT

# Tracks with CFT only = NO SMT

# Summary

- **Fri-Thu: 7 days in a row with >90% Del/Rec Lumi.**
- **9.6 pb<sup>-1</sup> delivered: second best week**
- **16% of SMT ladders disabled.**
