

Charge and Organization for the 1st Meeting of the Fermilab Run II Computing Review Panel (Run II CRP)

The Panel is asked to review Run II offline computing for CDF and D0. The aim is to review the plans for providing the capabilities to collect, store and analyze the Run II data.

For the review CDF and D0 will present plans covering the needs for operations and upgrades for Run II. The budget is tentatively known for this period: about \$2M for equipment and about \$500K for tapes per year and per experiment. The review should assess whether these numbers are adequate.

The first review is scheduled for June 4 in the afternoon until June 6 at noon. The first afternoon and the next day in the morning will be devoted to presentations. The second day afternoon and the third day in the morning will be devoted to:

- a) responses to any questions the Panel might have;
- b) Executive Session of the Panel and drafting of report;
- c) A Close Out meeting with the Directorate, the Computing Division management, and the collaboration's management (including at least one spokesperson and project manager from each collaboration and the lead presenters).

We expect that the Panel will meet once a year. We hope to receive a written report shortly after the review.
