

Workshop Goals

- **Establish a bi-directional channel of communication between the Online Group & DØ detector personnel**
 - **Provide information about the online system to developers of detector-specific online software**
 - **Provide critical feedback from detector software developers to the Online Group**
- **Minimize the amount of effort expended across DØ developing multiple test stand data acquisition systems**

Desired Outcomes

- **Help drive development of the Run II online system**
- **Identify defects and/or oversights in the online system design**
- **Encourage developers to begin writing detector-specific online software**

Next Steps

- **Hold a follow-on session during the Seattle collaboration meeting to help solidify progress made during the Workshop**
 - **Identify contact people within the Online Group to provide assistance to developers of detector-specific online software**
 - **The Central Muon Detector has been selected as the first DØ detector to be commissioned via the Run II online system**
-
